

## Why we strive to communicate with the public, putting advocacy to work.

To protect Georgia's coast – including our waters, wildlife, beaches, forests, and marshlands – and to help prevent the worst consequences of Earth's overheating climate, we believe it is vital to communicate with Georgians in building public awareness about environmental threats, legal controls, and needed corrective actions. And, to improve the future, our staents often cite authoritative, factual information that is too often overlooked. Accordingly, Center staff and board members work diligently in preparing these materials submitted to newspapers and online media outlets. We believe this work is essential to advancing the common good of coastal Georgia by informing and engaging fellow citizens.
